

# 3Ps Methodology

People · Process · Product

The 3Ps methodology is a very simple and effective analysis tool that fits perfectly in an agile environment. Rapid changes call for a method that can be used to quickly analyze and determine if a particular approach or any changes implemented have positive outcomes. Rest assured that we are highly focused on quality and consistency.

## Pillars

### People

Refers to all individuals involved and is arguably the most complex pillar in the equation.

### Process

The finite number of steps and actions taken to reach a desired goal or outcome.

### Product

The "object" of the exercise. It can be a physical object, a software application or a service.

## Approach

Using a quantitative and qualitative assessment survey, we are able to capture feedback and analyze numerous facets of an event. The exercise helps capture shortcomings at different points in time.

### Pre Event

The proactive analysis identifies any weak points that can lead to higher costs or a negative experience.

### Post Event

Retrospective analysis that identifies positive outcomes as well as key improvement opportunities.

## Outcome

### Continuous Improvement

In a constantly changing environment, the 3Ps make it easier to adapt to new situations on the go.

### Highly Adaptive

Able to analyze events and situations at any level, making it easy to pinpoint and fix any problem area.

### Multiple Benefits

Lower costs, increased efficiency, better communication, safe and open work environment.

### Lessons Learned

Feedback, analysis as well as documenting; help speed up and make better decisions in the future.
